

UKR Lezhe - EUR 15.6 million WPIP / MIP V investment measures

Drinking Water Supply

- **Shengjin water supply system:** About 3.8 km new transmission main and rehabilitation of existing wells (improved water supply for up to 80,000 citizens during touristic season)
- **Kodra Marlekaj:** new distribution network (over 12 km pipes) and booster pump station (5,000 inhabitants benefiting)
- **Kakariq & Gocaj Village Water Supply System:**
- 2 new wells, new reservoir and over 23 km new distribution net work pipes (3,000 inhabitants benefiting)

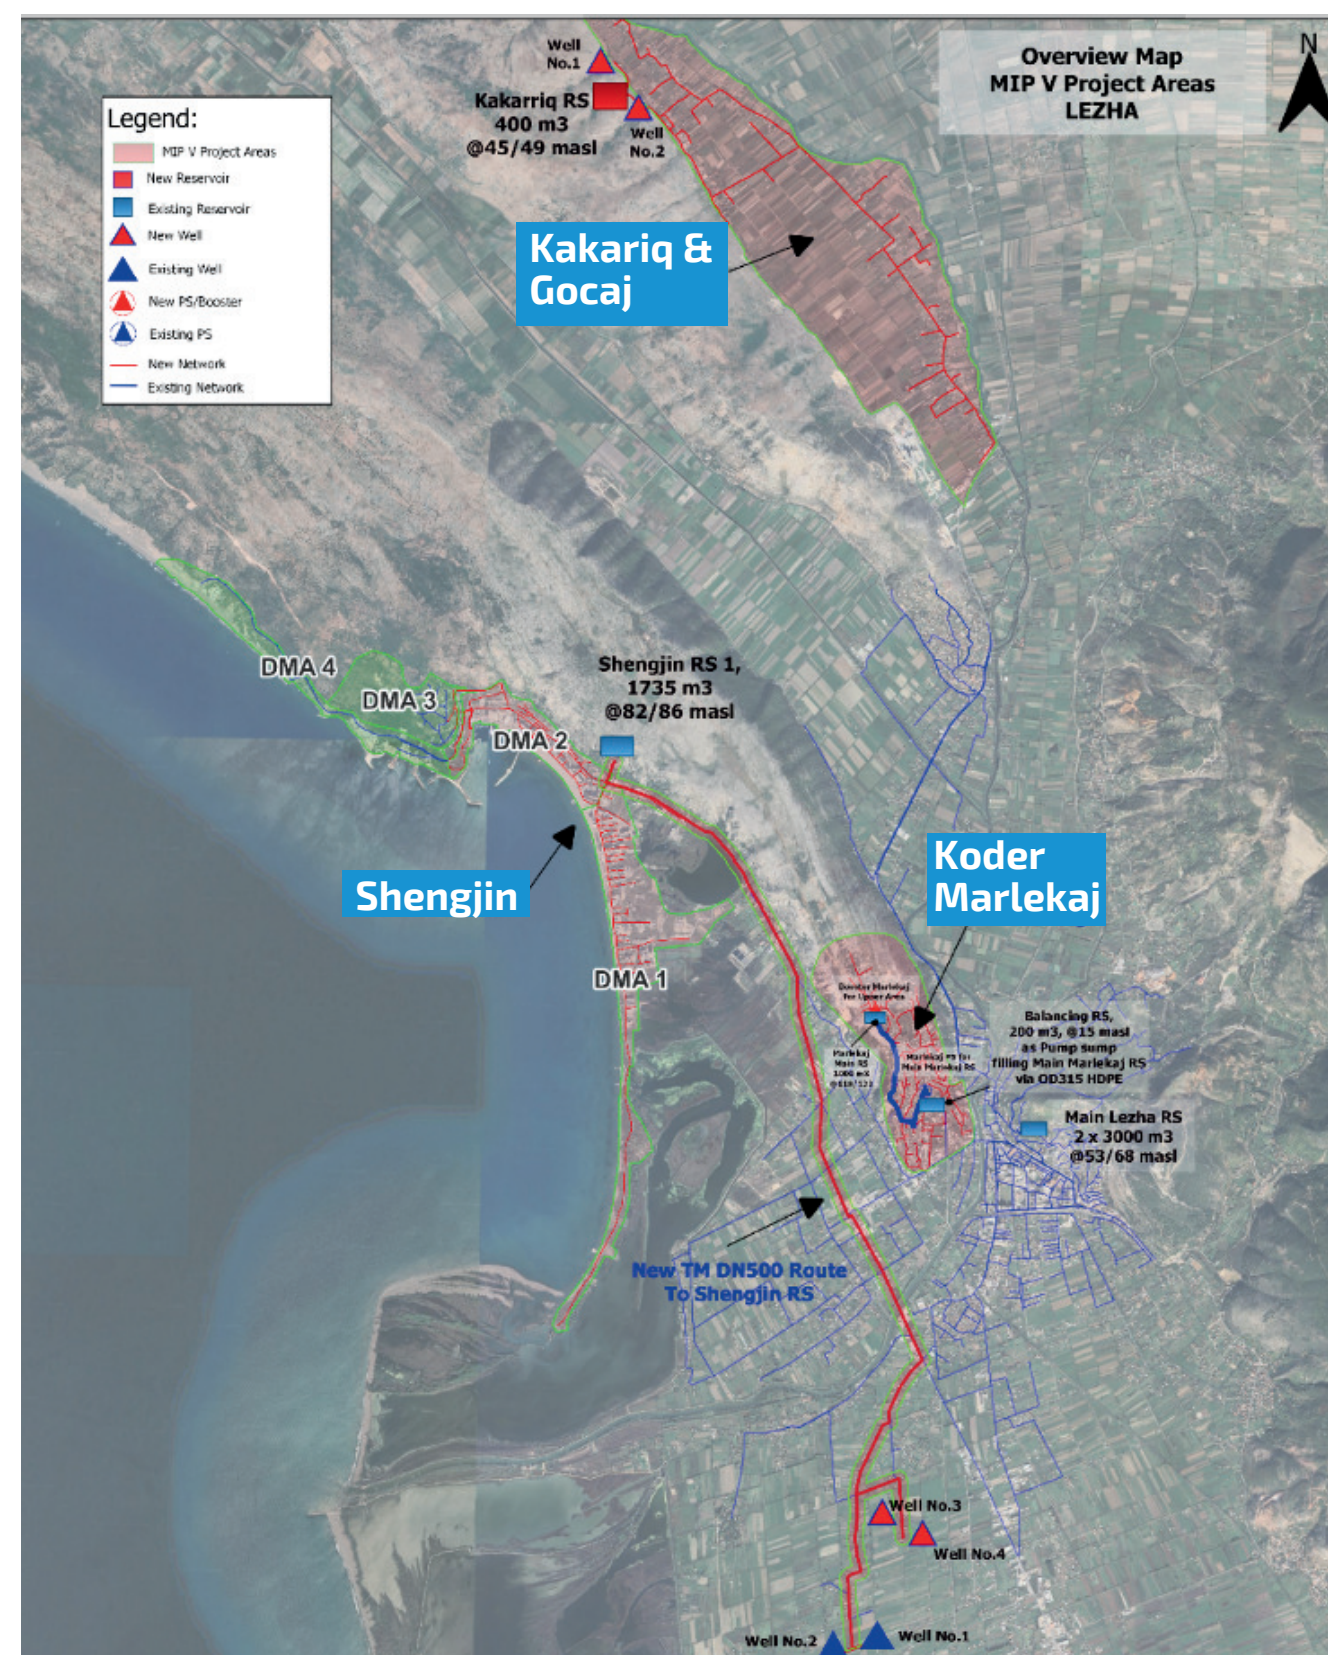

Waste Water System

- Upgrading **Wastewater Treatment Plant** – new inlet pumping station, mechanical equipment (improved bathing water quality for about 50,000 citizens)

Storm water system

- Complete **redesign of the stormwater network** in order to capture a maximum of the outer/rural areas on the hillside and to avoid discharge to low-lying areas in the city-centre
- **Separation of wastewater from storm water** in the network;
- For Disaster Risk Reduction: new box culverts, sediment traps, construction and rehabilitation of stormwater pumping stations.

Key impact: two completely new networks - more safety for people from stormwater
